

# LUMINUT

**LUMINUT** is a custom-designed light fixture created for a donut café chain in New York City, which currently has three branches in New York State and plans to expand into other cities. This unique fixture enhances the space's ambiance while providing the required lighting levels at the counter, ensuring optimal visual appeal for displaying donuts. The design is inspired by the shape of a donut, incorporating curved forms and linear elements that guide the lighting concept. Perforated holes allow light to pass through, forming a pattern that represents the current map of the USA while also referencing the sugar texture on a donut's surface. Additionally, the fixture features dynamic color-changing capabilities, inspired by the variety of donut colors available in the market. The circular structure comprises four modular quarter units, offering flexible design options to accommodate future rebranding efforts across different café locations. A transparent plastic cap on the exterior highlights the café's current location and planned future expansions. Overall, Luminut is designed not only to enhance the visual appeal of the space but also to ensure proper illumination of the café counter, allowing customers to appreciate the details and colors of the products while supporting the café's evolving brand identity.
